

Canadian Society of Ophthalmic Medical Personnel

Friday, June 10, 2011, 0755-1630

Moderators

Gordon Carter & Marc Lafontaine

Objectives

At the end of this session, participants will be able to:

- Understand different lighting and examination techniques on a slit lamp
- Understand some issues that patients have had with drops or multiple drops and how to help patients get their medications correct
- Understand basics of B Scan exams
- An introduction to new tonometers and the differences between them
- Understand physician challenges with strabismus surgery
- Understand function of a manual lensometer and the why behind how it works
- Understand the various presentations of eyelid lesions
- Workshops: hands-on sessions to complement the lectures
